ALPHIRA CAPITAL

DEEP & ADVANCED ORDER FLOW TRADING COURSE

60-Day Professional Curriculum

LEVEL	Intermediate to Professional
MARKETS	XAUUSD | Forex | BTC/Crypto | Indices | Futures
CORE TOOLS	Footprint | Volume Profile | Delta | CVD | DOM | Market Profile | VWAP | Liquidity
FOCUS	Auction logic, liquidity, execution, confirmation and repeatable trading models

Course Objective

Build traders who can understand what is happening behind the candle: where liquidity is resting, who is aggressive, who is absorbing, whether an auction is being accepted or rejected, and how to convert that information into structured entries, invalidations and targets.

CORE PROCESS

Market Context -> Auction -> Volume Profile -> Liquidity -> Aggression -> Absorption -> Delta/CVD -> Footprint -> Execution -> Risk Management

MODULE 1 - MARKET MICROSTRUCTURE FOUNDATION

Days 1-5

1. What Order Flow actually measures
2. Traditional Technical Analysis vs Order Flow
3. Centralized vs decentralized markets
4. Futures data vs CFD/Forex data
5. Bid, Ask and Spread mechanics
6. Market orders vs limit orders
7. Passive buyers/sellers
8. Aggressive buyers/sellers
9. Matching engine basics
10. How price actually moves
11. Liquidity creation and consumption
12. Auction Market Theory
13. Price acceptance vs rejection
14. Efficient vs inefficient auctions
15. Why candles hide execution information

MODULE 2 - FOOTPRINT CHART MASTERY

Days 6-12

16. Footprint chart construction
17. Bid x Ask Footprint
18. Volume Footprint
19. Delta Footprint
20. Profile Footprint
21. Reading individual price levels
22. Positive and negative Delta
23. Candle Delta vs session Delta
24. Maximum/Minimum Delta
25. Delta percentage
26. Imbalance calculation
27. Buy imbalance
28. Sell imbalance
29. Stacked imbalances
30. Multiple stacked imbalance zones
31. Unfinished auctions
32. Finished auctions
33. Zero prints
34. Single prints

35. High-volume nodes inside Footprint
36. Low-volume nodes inside Footprint

MODULE 3 - DELTA & CVD

Days 13-17

37. Delta psychology
38. What positive Delta really means
39. What negative Delta really means
40. Delta confirmation
41. Delta divergence
42. Bullish Delta divergence
43. Bearish Delta divergence
44. Price vs Delta disagreement
45. Cumulative Volume Delta (CVD)
46. CVD trend analysis
47. Price/CVD divergence
48. Spot vs futures CVD
49. Delta exhaustion
50. Delta acceleration
51. When Delta gives false signals

MODULE 4 - ABSORPTION & EXHAUSTION

Days 18-22

52. Absorption mechanics
53. Buyer absorption
54. Seller absorption
55. Passive limit-order absorption
56. Aggressive execution into absorption
57. Identifying absorption on Footprint
58. Repeated absorption
59. Absorption at support/resistance
60. Absorption at session extremes
61. Exhaustion vs absorption
62. Failed auction
63. Trapped buyers
64. Trapped sellers
65. Stop-run + absorption model
66. Liquidity sweep + Footprint confirmation

MODULE 5 - VOLUME PROFILE

Days 23-28

67. Volume Profile fundamentals
68. POC - Point of Control
69. VAH - Value Area High
70. VAL - Value Area Low
71. Value Area calculation
72. HVN - High Volume Node
73. LVN - Low Volume Node
74. Developing POC
75. Naked POC
76. Migrating POC
77. Session Profile
78. Fixed Range Profile
79. Composite Profile
80. Balanced profiles
81. Imbalanced profiles
82. P-shaped profile
83. b-shaped profile
84. D-shaped profile
85. Double-distribution profile
86. Acceptance/rejection around value

MODULE 6 - MARKET PROFILE & AUCTION THEORY

Days 29-33

87. TPO Market Profile
88. Initial Balance
89. Value migration
90. Day types
91. Normal Day
92. Normal Variation Day
93. Trend Day
94. Neutral Day
95. Double Distribution Trend Day
96. Open Drive
97. Open Test Drive
98. Open Rejection Reverse
99. Open Auction
100. Excess and poor highs/lows
101. Responsive vs initiative activity

MODULE 7 - DOM & LIQUIDITY

Days 34-38

102. Depth of Market (DOM)
103. Level 2/order-book mechanics
104. Resting liquidity
105. Pulling liquidity
106. Stacking liquidity
107. Bid/Ask depth
108. Liquidity walls
109. Iceberg orders
110. Hidden liquidity
111. Order replenishment
112. Absorption through DOM
113. Spoofing concept and limitations
114. Liquidity shifting
115. Why DOM changes extremely quickly
116. Combining DOM + Footprint

MODULE 8 - VWAP & INSTITUTIONAL EXECUTION

Days 39-42

117. VWAP fundamentals
118. Session VWAP
119. Anchored VWAP
120. VWAP standard-deviation bands
121. VWAP mean reversion
122. VWAP trend continuation
123. VWAP acceptance/rejection
124. VWAP + Volume Profile
125. VWAP + Delta
126. VWAP + Footprint confirmation

MODULE 9 - ADVANCED LIQUIDITY MODELS

Days 43-47

127. Liquidity pools
128. Stop liquidity
129. Buy-side liquidity
130. Sell-side liquidity
131. Liquidity sweep vs genuine breakout
132. Stop-loss cascade

133. Breakout traders getting trapped
134. Failed breakout Footprint signature
135. Absorption after liquidity sweep
136. Delta divergence after sweep
137. Stacked imbalance reversal
138. Initiative breakout confirmation
139. Acceptance above resistance
140. Acceptance below support

MODULE 10 - PROFESSIONAL ORDER-FLOW SETUPS

Days 48-54

141. Setup A: Liquidity Sweep -> Absorption -> Reversal
142. Setup B: Stacked Imbalance Continuation
143. Setup C: Delta Divergence Reversal
144. Setup D: Failed Auction Reversal
145. Setup E: POC Retest
146. Setup F: VAH/VAL Rejection
147. Setup G: LVN Rejection
148. Setup H: HVN Acceptance
149. Setup I: VWAP Mean-Reversion
150. Setup J: VWAP Trend Continuation
151. Setup K: Trapped Buyer/Seller Reversal
152. Setup L: Breakout + Acceptance + Imbalance

Execution framework for every setup

Context -> Location -> Liquidity -> Footprint Signal -> Confirmation -> Entry -> Stop -> Target -> Invalidation

Students learn to avoid treating a single Footprint signal as an automatic trade. A valid setup requires context, location and confirmation.

MODULE 11 - XAUUSD ORDER FLOW SPECIALIZATION

Days 55-57

153. Best Order Flow data for Gold
154. COMEX Gold futures vs XAUUSD
155. GC futures as execution context
156. London session Gold behavior
157. New York/COMEX open
158. London-New York overlap

159. Gold liquidity sweeps
160. Gold news volatility
161. CPI/FOMC/NFP Footprint behavior
162. Absorption around Gold extremes
163. Gold Volume Profile setups
164. Gold Delta/CVD divergence
165. XAUUSD execution model

MODULE 12 - EXECUTION, RISK & PROFESSIONAL TRADING

Days 58-60

166. Pre-market preparation
167. Creating directional bias
168. Scenario planning
169. Entry confirmation hierarchy
170. Limit vs market execution
171. Stop placement using order-flow invalidation
172. Scaling into positions
173. Partial profit booking
174. R-multiple management
175. Daily loss limit
176. Maximum drawdown rules
177. Overtrading prevention
178. News-event risk
179. Screenshot journaling
180. Footprint replay practice
181. Building an Order Flow playbook
182. Backtesting 100+ examples
183. Weekly performance review
184. Creating a professional trading plan

FINAL ALPHIRA CAPITAL TRADING FRAMEWORK

By the end of the course, students should move beyond asking only 'Buy or Sell?' and be able to explain the auction and execution logic behind a trade.

Market Context -> Auction -> Volume Profile -> Liquidity -> Aggression -> Absorption -> Delta/CVD -> Footprint -> Execution -> Risk Management

FINAL CERTIFICATION REQUIREMENT

Students complete 100 replay/backtested trades + 20 simulated forward trades, document screenshots and reasoning, calculate win rate, average R:R, expectancy and maximum drawdown, then present 3 personally validated Order Flow setups.

Risk Notice

This curriculum is for education and skill development. Trading leveraged products involves substantial risk. Order-flow tools provide information and context, not guaranteed outcomes. Risk management and independent decision-making are mandatory.
